SUMMARY

Backend software engineer with four years of experience building distributed data systems and analytics platforms. Strong background in Go, Python, Kafka and cloud-native infrastructure; comfortable owning services end to end, from design review to on-call.

EXPERIENCE

Northstar Systems LLC

Atlanta, GA

Software Engineer II

January 15, 2024 – Present

- Designed and shipped the event-ingestion service for Northstar's logistics analytics platform (Go, Kafka, Postgres), reducing p95 latency by 38% and cutting duplicate events to near zero.
- Built the internal data-quality monitoring pipeline used by the analytics and customer-success teams; alerts now catch schema drift before it reaches customer dashboards.
- Mentor two junior engineers and lead the weekly backend design review.

Cobalt Analytics Inc.

Austin, TX

Data Engineer

August 2021 – December 2023

- Owned ETL pipelines processing 2B+ daily events on Spark and Airflow across three product lines.
- Migrated the reporting warehouse from Redshift to Snowflake with zero customer-facing downtime; reduced monthly warehouse spend by 27%.
- Recognized with the 2023 Engineering Impact Award.

The University of Texas at Austin

Austin, TX

Graduate Research Assistant, Data Systems Lab

September 2019 – May 2021

- Research on streaming query optimization; co-authored one workshop paper (DEBS 2021).

EDUCATION

The University of Texas at Austin

May 2021

M.S., Computer Science · GPA 3.8/4.0

Gujarat Technological University

May 2018

B.Tech., Computer Engineering · First Class with Distinction

TECHNICAL SKILLS

Languages

Go, Python, TypeScript, SQL

Data & Streaming

Kafka, Spark, Airflow, Postgres, Snowflake, Redis

Infrastructure

Kubernetes, AWS (EKS, S3, Kinesis), Terraform, GitHub Actions
